

### Why Open Access?

The main advantage of making research available through Open Access is that Open Access articles are far more widely read and therefore your work and results are made more broadly visible. This supports your reputation and that of your institution. Open Access articles achieve citation rates that are up to three times higher than traditional printing because they are immediately available to scholars, scientists, students and the public worldwide. They can be accessed easily from any workplace with an internet connection. Because the materials are not subject to space limitations, all of the information, arguments and proofs that are wanted can be shared.

Open Access promotes international cooperation and with it, the process of conducting research. Our authors receive a large amount of feedback if they provide their contact.

Worldwide collaboration is becoming increasingly important, particularly in the small but highly interdisciplinary field of conservation-restoration. Highly esteemed institutions, including the Getty Conservation Institute in Los Angeles and the International Institute for Conservation of Historic and Artistic Works (IIC) in London, are supporting the fight against „grey literature“.

### Hornemann Institute

The Hornemann Institute supports the worldwide transfer of knowledge in the field of conservation-restoration. Since 2003 it has been part of the University of Applied Sciences und Arts Hildesheim/Holzminden/Göttingen. It bears the name of the first German explorer of Africa, Friedrich Konrad Hornemann, who was born in Hildesheim in 1772.

What does Open Access mean?

Open Access to scientific literature means

it is freely available

to the public on the internet.

<http://open-access.net>

### Open Access and the Hornemann Institute

Open Access to scientific literature means it is freely available to the public on the internet. This service should give authors control over the integrity of their work, and respect their right to be properly acknowledged and cited.

The Hornemann Institute provides this for you.

### Our service is free for everyone

We publish on our website:

- Academic theses
- Conference papers
- Documentation records
- Articles
- Project papers
- Videos
- Posters from poster sessions

The important aspect is scientific quality. All copyrights will be maintained by the authors. With their user data they will retain unrestricted access to the data published under their names.

### New

To make the data easier to cite we offer our authors a „persistent identifier“ for major publications of texts or pictures. These DOIs (Digital Object Identifiers) can be searched in the catalogues of many well-known libraries worldwide and are accepted by many scientific journals as citation.

Our partner:

### Cooperation with Publishers

Many publishers or editors of preprinted conference papers enable the authors to offer their papers for free download immediately, or after a short period.
